Section 1 : Coding

1. Problem Statement

Sheela wants to distribute cookies to her children, but each child will only be happy if the cookie size meets or exceeds their individual greed factor. She has a limited number of cookies and wants to make as many children happy as possible. Priya decides to sort both the greed factors and cookie sizes using QuickSort to efficiently match cookies with children. Your task is to help Sheela determine the maximum number of children that can be made happy.

Input Format

The first line of input consists of an integer n, representing the number of children.

The second line contains n space-separated integers, where each integer represents the greed factor of a child.

The third line contains an integer m, representing the number of cookies.

The fourth line contains m space-separated integers, where each integer represents the size of a cookie.

Output Format

The output prints a single integer, representing the maximum number of children that can be made happy.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 3
1 2 3
2
1 1
Output: The child with greed factor: 1

Answer

```c
#include <stdio.h>

void swap(int *a, int *b) {
    int temp = *a; *a = *b; *b = temp;
}

int partition(int arr[], int low, int high) {
    int pivot = arr[high];
    int i = low - 1;
    for (int j = low; j < high; j++) {
        if (arr[j] < pivot) {
            i++; swap(&arr[i], &arr[j]);
        }
    }
    swap(&arr[i+1], &arr[high]);
    return i+1;
}

void quickSort(int arr[], int low, int high) {
```

```c
        if (low < high) {
            int p = partition(arr, low, high);
            quickSort(arr, low, p - 1);
            quickSort(arr, p + 1, high);
        }
    }

    int main() {
        int n, m;
        scanf("%d", &n);
        int greed[n];
        for (int i = 0; i < n; i++) scanf("%d", &greed[i]);

        scanf("%d", &m);
        int cookies[m];
        for (int i = 0; i < m; i++) scanf("%d", &cookies[i]);

        quickSort(greed, 0, n - 1);
        quickSort(cookies, 0, m - 1);

        int i = 0, j = 0;
        int happyCount = 0;

        while (i < n && j < m) {
            if (cookies[j] >= greed[i]) {
                happyCount++;
                i++;
                j++;
            } else {
                j++;
            }
        }

        if (happyCount > 0)
            printf("The child with greed factor: %d\n", greed[happyCount - 1]);
        else
            printf("The child with greed factor: 0\n");

        return 0;
    }
```

Status : Partially correct   *Marks : 4/10*

2. Problem Statement

Priya, a data analyst, is working on a dataset of integers. She needs to find the maximum difference between two successive elements in the sorted version of the dataset. The dataset may contain a large number of integers, so Priya decides to use QuickSort to sort the array before finding the difference. Can you help Priya solve this efficiently?

Input Format

The first line of input consists of an integer n, representing the size of the array.

The second line consists of n space-separated integers, representing the elements of the array.

Output Format

The output prints a single integer, representing the maximum difference between two successive elements in the sorted form of the array.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1
10
Output: Maximum gap: 0

Answer

```c
// You are using GCC
#include <stdio.h>
void swap(int* a, int* b) {
    int temp = *a;
    *a = *b;
    *b = temp;
}
int partition(int arr[], int low, int high) {
    int pivot = arr[high];
    int i = low -1;
    for (int j = low; j < high; j++) {
        if (arr[j] < pivot) {
```

```c
            i++;
            swap(&arr[i], &arr[j]);
        }
    }
    swap(&arr[i+1], &arr[high]);
    return i+1;
}
void quickSort(int arr[], int low, int high) {
    if (low < high) {
        int p = partition(arr, low, high);
        quickSort(arr, low, p-1);
        quickSort(arr, p+1, high);
    }
}

int main() {
    int n;
    scanf("%d", &n);

    int arr[n];
    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);
    quickSort(arr, 0, n-1);
    if (n == 1) {
        printf("Maximum gap: 0\n");
        return 0;
    }
    int maxGap = 0;
    for (int i = 1; i < n; i++) {
        int diff = arr[i] - arr[i-1];
        if (diff > maxGap)
            maxGap = diff;
    }

    printf("Maximum gap: %d\n", maxGap);

    return 0;
}
```

Status : Correct   ***Marks : 10/10***

3. Problem Statement

Meera is organizing her art supplies, which are represented as a list of integers: red (0), white (1), and blue (2). She needs to sort these supplies so that all items of the same color are adjacent, in the order red, white, and blue. To achieve this efficiently, Meera decides to use QuickSort to sort the items. Can you help Meera arrange her supplies in the desired order?

Input Format

The first line of input consists of an integer n, representing the number of items in the list.

The second line consists of n space-separated integers, where each integer is either 0 (red), 1 (white), or 2 (blue).

Output Format

The output prints the sorted list of integers in a single line, where integers are arranged in the order red (0), white (1), and blue (2).

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 6
2 0 2 1 1 0
Output: Sorted colors:
0 0 1 1 2 2

Answer

```c
// You are using GCC
#include <stdio.h>
void swap(int* a, int* b) {
    int temp = *a;
    *a = *b;
    *b = temp;
}
int partition(int arr[], int low, int high) {
    int pivot = arr[high];
    int i = low - 1;
```

```c
    for (int j = low; j < high; j++) {
        if (arr[j] < pivot) {
            i++;
            swap(&arr[i], &arr[j]);
        }
    }
    swap(&arr[i + 1], &arr[high]);
    return i + 1;
}
void quickSort(int arr[], int low, int high) {
    if (low < high) {
        int pi = partition(arr, low, high);
        quickSort(arr, low, pi - 1);
        quickSort(arr, pi + 1, high);
    }
}

int main() {
    int n;
    scanf("%d", &n);
    int colors[n];
    for (int i = 0; i < n; i++) {
        scanf("%d", &colors[i]);
    }

    quickSort(colors, 0, n - 1);

    printf("Sorted colors:\n");
    for (int i = 0; i < n; i++) {
        printf("%d ", colors[i]);
    }
    printf("\n");
    return 0;
}
```
